

Same $\eta = 0.65$, bigger boxes: the wall layer (orange) shrinks like perimeter/area $\propto 1/\sqrt{N}$

$N = 100$, $L = 11 \sigma$

wall layer (1σ) = 36 % of area, $1/\sqrt{N} = 0.100$

$N = 400$, $L = 22 \sigma$

wall layer (1σ) = 18 % of area, $1/\sqrt{N} = 0.050$

$N = 1600$, $L = 44 \sigma$

wall layer (1σ) = 9 % of area, $1/\sqrt{N} = 0.025$
