

TEST A: c_s against record length, the same trajectories cut to each length
 N = 100, 12 Román masses, 25 seeds each, drift-first, strict health contract. Error bar on the Román mean = 1σ scatter of per-mass c_s .

L0 = 20σ ($\eta = 0.196$)

L0 = 7.5σ ($\eta = 0.524$)

● Román: mean of peak bins
■ median of peak bins
▲ 3-bin parabolic peak
◆ seed-averaged spectrum fit

--- Román 2002 Table I, grey band = its error
--- Kolafa-Rottner 2006
